Concentrated Liquidity Market Maker

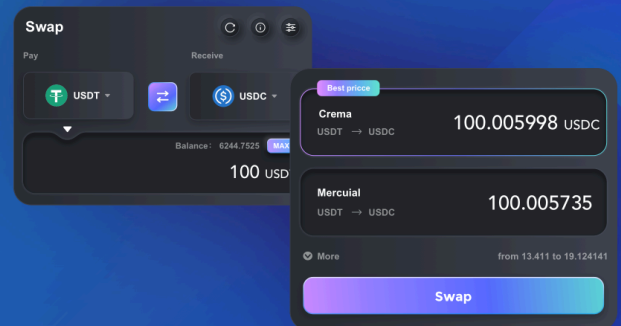

CLMM allows liquidity providers to set specific price ranges, add single-sided liquidity and do range order trading. It redefines the capital efficiency and trading depth on Solana.

Our Edges

For Traders

Embrace the higher market depth and lower price slippage

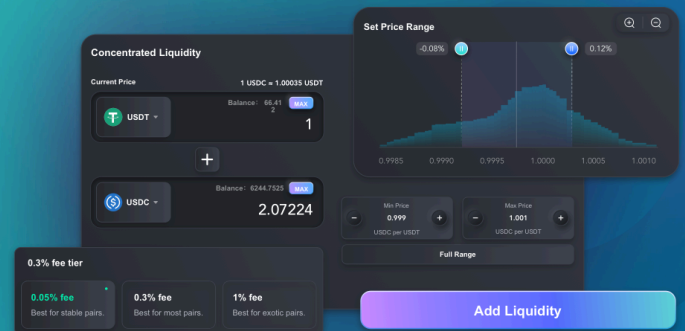

The price impact of user orders is much less on CLMM pools because there is more liquidity concentrated around the current price.

For Liquidity Providers

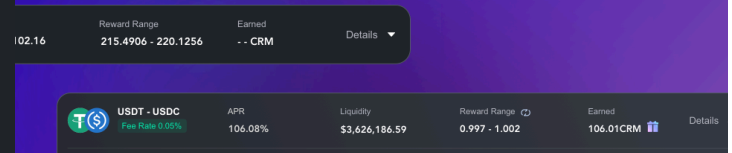

Maximize the utilization of their capital

LPs can earn transaction fees more efficiently by specifying a narrow and reasonable price range. Extra incentives will also be distributed through NFT liquidity farming.

For Developers

Integrate Crema's service with no barriers

Crema will be a core building block of the Defi 2.0 infrastructure on Solana. Any Solana-based application can easily call or integrate Crema's service with its ready-to-use SDK.

Get LP NFT	NFT ID 2	Liquidity \$ 1856.89	Price Range 0.999 - 1.001	Earned -- CRM	Stake
View Contract	NFT ID 1	Liquidity \$ 1,395.27	Price Range 1 - 1.002	Earned 106.01CRM	Unstake
